FLEET PERIODICAL MAINTENANCE AND SERVICE TRACKING SYSTEM

Fleet periodical maintenance and service tracking system provides to follow and control the vehicles of the companies having a rented vehicle fleet within the field. Due to the system, the periodical maintenance and service processes of the vehicles are taken under control and recorded, unnecessary expenses arising from negligence or forgetfulness are eliminated. The companies can manage their fleet efficiently and completely by this system

- All the information of the rented vehicles is recorded in the system. Thus the periodical maintenance and service processes of the vehicles are taken under control and they are completely recorded. By the data collected from the km. indicator of the vehicle, the maintenance times of the vehicles are automatically reminded.
- The bad usage statistics of the vehicle such as skidding, instant acceleration and deceleration etc. are kept and the report of all the processes performed in the service and all the replaced parts are reported together with their costs.
- Information about the traffic insurances of the vehicles and the car insurance end dates are recorded in the system. The system sends reminder messages to the users before the end date automatically.

Together with the fleet periodical maintenance and service tracking system, the companies manage their fleets from a single center as on-line by taking them under control and record. Due to the system, significant decreases are provided for the vehicle expenses and fuel, time and workmanship saving is gained.
