

## ARVENTO INDUSTRY SPESIFIC SOLUTIONS

# READY-MIXED CONCRETE FLEET MANAGEMENT SYSTEM

The “**Ready-Mixed Concrete Fleet Management System**” has been developed by Arvento specifically for companies that transport ready-mixed concrete. Thanks to the system, companies transporting ready-mixed concrete every day to hundreds of areas can manage all their field operations from single center via the internet and without losing time.

## Fleet Control and Management Through Internet

The system provides the companies involved in the transportation of ready-mixed concrete with the possibility of controlling and following their operations through the internet. All units used in field operations like vehicle fleets, pumps, production facilities, building sites and transported products are defined to the system and can be managed centrally.

## Detailed Reporting For Each Operation

The systems allows you to obtain detailed reports about actual and past operations concerning all units of the operation;

- The time period vehicles employ to reach each customer,
- Quantity of the transported material,
- Time employed for pouring,
- Percentage of fullness of the mixers,
- The time periods vehicles employ to come back from a delivery,
- If the job is completed within the targeted time period,
- Thanks to the driver recognition system the opportunity to know which driver is using a certain vehicle,
- The speed, idling time, routes and arrival times of the transportation vehicles,
- Agreement and order information,
- Information like order pump plans can be checked and managed with this system.
